# Back-end Developer

## Job Description

You will be a part of a close-knit team working to provide a robust and secure financial service. You will enjoy the challenge in implementing various features for our application services with long-term sustainability in mind.

## What kind of people are we looking for

- Passionate about programming.
- Eager to learn and grow, both technically and personally.
- Excellent in teamwork.
- Yearning to contribute to making the product better.
- Not afraid of suggesting changes and improvements.

## What we need to see on your portfolio

- Proficient in Web Application Development.
- Knowledge in web application frameworks.
- Able to work with data using MySQL and MariaDB, also Redis.
- Basic understanding of interacting with Unix environment.
- Able to run Git commands with closed eyes.
- Strong attention to detail.
- Excellent analytical and problem-solving skills.
- Speaks English. As long as our international friends at work can understand what you say, that's good enough.

## What makes you stand out from the crowd

- Proficient in speaking Unix even when asleep.
- Experience in using AWS.
- Prior experience in building web services. BIG plus point if you can show us your code sample.
- Writes self-documenting code.
- Knows how to write and perform tests.
- Ability to go full stack if needed.

# Cryptocurrency Wallet Developer

## Job Descriptions

- Understanding about Blockchain Platforms of several Cryptocurrencies (Bitcoin, Ethereum, Ripple, ERC20, etc)
- Understanding how Exchange service treats Cryptocurrency Assets and its Wallets.
- Developing backend logic and database for Cryptocurrency Wallets. (basically integrating blockchain APIs in the proper way.)

## Qualifications

- 3 or more years of experience in Web Server Development (skilled in web application frameworks and script languages)
- A person who is interested in researching new technologies.
- A person who is interested in blockchain technology.

## Skills & Knowledge

- Knowledge about how to make sure the code works in an exactly expected way. (Unit Testing, Logging)
- Knowledge about how to guarantee the servers run continuously and stable. (Clustering, Process Management)
- Basic Knowledge of Data Encryption and Information Security.
- General Level Knowledge of Infrastructure and Technical Compliance.
- Familiar with Git.

## Plus Point

- Experience developing and operating cryptocurrency wallet server.
- Experience developing Smart Contract.

# Junior UI/UX Designer

## Responsibilities:

- Designing hi-fidelity and low-fidelity graphics or UI assets.
- Improving visual design and user experience from current service.
- Researching for future trends and competitor strategy.
- Collaborating with developers on concepts and designs.
- Involving in strategic planning to define user/market needs.

## Requirements:

- Have a design or computer science related background (either graduated from Computer Science or Design major/class/training). Fresh graduates are welcome to apply.
- Have a portfolio with demonstrable design skills.
- Familiar with web responsive design and mobile design.
- Team player (good in both interpersonal communication skills).
- Have a good sense of art and passion for creating a great design concept.
- Able to use design tools (such as Sketch, Photoshop, Illustrator, XD, etc).
- Familiar with usability/interaction design and wireframing.
- Ability to work with corporate branding and app branding guidelines.
- Proficiency in English.
- Interested in stock or cryptocurrency exchange (digital assets) is a plus!
